

SBAR Hand-Off	Current day and time:	Thursday 1500				Admission day and time:	Thursday 1345						
Situation	Name:	Bernadette Jackson											
	Age:	85	Sex:	Female	Ethnicity:	African American			Religion:	Christian			
	Provider:	Kenneth Young, NP											
	Admission diagnosis:	Dehydration, urinary retention, and possible urinary tract infection											
Background	Pertinent medical history:	Mixed urinary incontinence; primary care provider started her on oxybutynin 1 week ago. For the past 5 days she has also taken over-the-counter loratadine for seasonal allergies. An interaction of the two medications resulted in urinary retention. This morning she presented to the emergency department with weakness, lethargy, and abdominal pain. A bladder scan revealed 620 mL of retained urine. A catheter was placed which drained all of the urine. A urine sample was sent for urinalysis.											
	Pertinent social history:	Widowed. Lives in assisted living complex.											
	Allergies:	No known drug allergies. Has environmental (seasonal) allergies.											
	Code status:	Do not resuscitate											
	Vital signs (most recent):	Time:	1400	T:	99.2 F 37.3 C	BP:	138/68	P:	90	RR:	24	O ₂ Sat:	93%
	Oxygen therapy:	Mode:	Room air		LPM:	Not applicable							
	Pain:	Rating:	3/10	Most recent pain medication:			Acetaminophen 500 mg			Time:	1230		
	Other recent medication:	Daily medications taken this morning at home											
	IVs:	Site:	Right antecubital	Type:	20-gauge PIV		Assessment:	Intact, patent	Fluid:	0.9% normal saline IV at 100 mL/hr			
	Drains and tubes:	Site:	None	Type:	Not applicable		Assessment:	Not applicable					
	Wounds:	Site:	None	Type:	Not applicable		Assessment:	Not applicable					
	ADLs:	Diet:	Regular diet, encourage fluids				Activity:	Bathroom privileges with assist					
	Restrictions:	Isolation:	Standard				Fall risk:	High					
	Assessments:	Neurologic:	Talkative during admission history. Oriented x 2. Reorients easily.										
		Cardiac:	S1 S2, no murmurs; diminished pulses, 1+ radial and dorsalis pedis bilaterally										
		Respiratory:	Lungs clear										
		GI/GU:	Complaining of "burning" at urethral site. Urinary catheter in place. Urine output over the last 2 hours has been about 30 mL per hour. The catheter bag was last emptied at 1400.										
		Integumentary:	Dry, intact; no skin breakdown noted										
		Ortho/Mobility:	Moderate assist x 1 during transfer to the bed										
		Psychosocial:	Emotionally stable; neighbor at bedside										
Other:													
Labs and diagnostics:	The urinalysis has just returned but I have not had time to look at it. Can you please review it and call Kenneth Young, NP, with the results? Labs completed earlier in the day indicate a possible infection.												
Assessment	Nurse's assessment:	Mrs. Jackson appears weak and slightly confused, possibly related to an infection. Neighbor states that this is new for Mrs. Jackson.											
Recommendation	Plan of care:	According to the progress note, the plan is for overnight monitoring. Urology has been consulted to see her tomorrow, and then will likely discharge to home.											
	Tests/results pending:	Complete blood count and chemistry panel in the morning.											
	Orders pending completion:	I have completed the admission nursing history and medication reconciliation form. I have not reviewed the admission orders yet.											
	Other:	Her neighbor and good friend Harriet is in the room with her. She is a good resource.
